

Lead Generation → Alumni: what the CRM has today, vs. what was asked for

Sarada Prasad's email asks for a full digital student lifecycle, not an admissions tool. Below is a module-by-module comparison of the 17-part target spec against what's actually implemented in the codebase right now — verified against real routes, tables, and files, not assumed from feature names.

17

MODULES IN TARGET SPEC

1

FULLY EXISTS

8

PARTIALLY EXISTS

8

MISSING ENTIRELY

Headline finding. Everything from **Lead Generation through Admission** (modules 1–5) is real and working — this is a genuine, demoable end-to-end flow. Everything **after Admission** — Onboarding, Academic Services, Exams, Re-registration, Completion, Placement, Alumni (modules 6–12) — does not exist in any form. Automation (13) is limited to campaign drip sequences, not the cross-module event triggers the spec describes. There is no LMS integration, no marketing website beyond one landing page, and no analytics/attribution layer.

§1 Module-by-module comparison

Status reflects what's implemented in code today, independent of the CRM's UI polish.

#	MODULE	STATUS	WHAT EXISTS / EVIDENCE
1	Lead Generation	● PARTIAL	Meta Lead Ads webhook is real (<code>server/index.js:4360</code>); Google v manual Sheets sync only; no LinkedIn ingestion, no UTM/campaign-parameter capture on any lead. Duplicate detection and round-robin assignment both work.
2	Lead Validation & Qualification	● PARTIAL	Lead scoring exists (<code>calculateLeadScore()</code>) but no

#	MODULE	STATUS	WHAT EXISTS / EVIDENCE
			eligibility fields (marks/board), no automated qualification rules — scores are informational only, doesn't gate student transitions.
3	Enquiry + Counselling	• PARTIAL	Counsellor dashboard, call logs, WhatsApp/SMS/email tracking, follow-up dates, and a morning "untouched leads" cron all exist. No programme-recommendation engine, no EMI info (EMI doesn't exist anywhere), no counsellor-facing FAQ/KB.
4	Application & Admission	• EXISTS	Full application lifecycle: auto-numbering (CUEEAP26 ...), status tracking, document upload/verify/reject, counsellor ownership, transfer approvals. This is the strongest part of the system.
5	Fee & Payment	• PARTIAL	Razorpay + offline/UTR payment both work, with approval workflow. No fee structure config table, no semester-fee model (only one flat application fee), EMI/installment tracking, no refund tracking.
6	Student Onboarding	• MISSING	No student ID generation, no onboarding checklist, no LMS account provisioning. "Orientation" appears once as a static seed calendar event, no workflow.
7	Student Academic Services	• MISSING	Zero references to "LMS" anywhere in the codebase. No course enrollment, attendance, or academic-support-tickets tracking tied to a learning platform.
8	Assignments & Examinations	• MISSING	No hall ticket, results, or backlog tracking. Only matches are unrelated ("Exam Fee" line item on the fee PDF, one static seed calendar event).

#	MODULE	STATUS	WHAT EXISTS / EVIDENCE
9	Re-registration / Semester Continuation	• MISSING	Zero matches for "semester", "re-registration", or "dropout" anywhere in the codebase.
10	Programme Completion	• MISSING	"Certificate" only refers to admission time documents (Transfer/Caste/Migration certificates collected pre-enrolment). No degree convocation tracking.
11	Placement & Career Services	• MISSING	"Placement" only appears as static marketing copy (chatbot FAQ answer, landing-page text). No resume, career profile, drive, or interview tracking.
12	Alumni Management	• MISSING	"Alumni" appears once, as marketing copy on the landing page. No alumni database, events, or engagement tracking.
13	Automation	• PARTIAL	Drip Workflows support time-delayed, manually-enrolled multi-channel sequences. No generic event-trigger engine — nothing fires automatically off "payment pending," "document rejected," or similar state changes; only a couple of hardcoded cron jobs exist.
14	CRM Dashboards	• PARTIAL	Role-scoped Management/Counselor dashboards plus Analytics, Reports, Productivity, and Leaderboard views exist and work well. No Academic/Operations, Placement, or Alumni dashboard — consistent with those modules not existing.
15	Website (cuedu.in)	• PARTIAL	No separate marketing site — one landing page capture landing page (<code>PublicInquiry.jsx</code>) lives inside the CRM app itself. No programme-detail pages, faculty, testimonials, or brochure downloads.

#	MODULE	STATUS	WHAT EXISTS / EVIDENCE
16	Chatbot / WhatsApp / Voicebot	● PARTIAL	A rule-based FAQ widget exists (keyword pattern-matching, no AI backend) but it doesn't create leads write to the CRM — it's a static, disconnected FAQ box. No voicebot exists in any form.
17	Analytics & Marketing Integration	● MISSING	No Google Analytics, Meta Pixel/CAF or UTM capture anywhere. Campaign records store budget/spend totals but there's no cost-per-lead or attribution math computed from them.

§2 Readiness of the Friday demo flow

Mapped against the 17-step lead-to-alumni journey from the email. Steps 1–11 are genuinely demoable today; 12–17 have no underlying feature to show.

1. Website ● **PARTIAL**

One landing page exists and works, not the full programme-discovery site described in the email — fine for a focused demo, not a benchmark-quality site yet.

2–3. Apply/Enquire → lead enters CRM ● **WORKS**

Public inquiry form posts straight into the lead table with duplicate checking.

4. Counsellor auto-assignment ● **WORKS**

Round-robin assignment logic is live.

5–6. Contact + follow-up scheduled ● **WORKS**

Call logging, WhatsApp/email tracking, and follow-up dates all function.

7. Lead becomes qualified ● **MANUAL**

Lead score exists but doesn't drive an automatic "Qualified" transition — a counsellor moves the stage by hand, which is fine for a live demo.

8–11. Application → documents → payment → admission confirmed ● **WORKS**

This is the strongest, most complete part of the product — application auto-creation, document verification, Razorpay/offline payment, approval, and the auto-sent admission letter all function end-to-end.

- ❌ 12. Student onboarding • NOT BUILT
- ❌ 13. Semester progression • NOT BUILT
- ❌ 14. Examination • NOT BUILT
- ❌ 15. Completion • NOT BUILT
- ❌ 16. Placement • NOT BUILT
- ❌ 17. Alumni • NOT BUILT

§3 What this means for Friday

The honest story to tell: "Phase 1 — Lead to Admission — is live and working end-to-end today."

That's steps 1–11, and it's a real, running system, not a mockup. Demo it live: a lead comes in from the landing page, gets assigned, gets counselled, converts to an application, gets documents verified, pays, and gets an admission letter auto-emailed.

Steps 12–17 have zero underlying implementation — there's no realistic way to build working Onboarding, Academic Services, Exams, Re-registration, Completion, Placement, or Alumni features by Friday. Trying to fake these with static screens risks the demo reading as thin the moment anyone asks a follow-up question.

Recommended framing: show the live Lead→Admission flow as "Phase 1, shipped," then present modules 6–17 as a named roadmap (Phase 2: Onboarding + Academic Services; Phase 3: Exams + Re-registration + Completion; Phase 4: Placement + Alumni) with the automation engine (module 13) called out as the connective layer that makes the whole thing feel like one system rather than a database — this directly answers the "digital ecosystem, not a database" line in the email without overclaiming what exists today.

Prepared from a full-repo audit of the CCRM codebase — every "exists" claim above is backed by a specific route, table, or file.
